

Shevchenko I.Yu.

**Conceptual provisions of the state programming of development
of the automotive industry of Ukraine**

The concept of the State Target Program for the Development of Automotive Industry of Ukraine for the period till 2025 is formed in the article. The proposed concept for the development of the automotive industry of Ukraine is distinguished by: substantive and structural perfection in comparison with previous concepts of stimulating automobile production; using a harmonization approach in the formation of conceptual provisions for the development of the automotive industry. Automotive industry occupies an important place in the global economy. According to the data of the International Organization of Automobile Manufacturers, while the consolidated contribution of car manufacturers to national budgets is more than 18 billion USD; investments in the automotive industry - more than 84 billion USD; the number of people employed in the automotive industry is over 6,800,000 workers [1-2]. Automotive industry is one of the sectors with high rates of added value; it stimulates the governments of countries to develop their own automotive complexes. Thus, in the developed Concept of the State Target Program for the Development of the Automotive Industry of Ukraine for the period till 2025, the substantive structural deficiencies of the Concept for the development of the automotive industry and regulation of the car market in the period up to 2015 and the Concept of the State Target Economic Program for the Development of the Automobile Industry for the Period till 2020 were offset. At the same time, the prospects for further research are to clarify the amount of funds (by funding sources) required for the implementation of the Program, and predict the potential socio-economic effect resulting from the implementation of the Program.
