ANALYSIS OF INDUSTRIAL PRODUCTION OF UKRAINE

The article describes the role and importance of industrial production in ensuring the processes of economic growth of the national economy. Industrial enterprises are the basic and leading foundation of the national economy. The basis is manifested in the fact that industrial enterprises provide means of production to other sectors of the economy. The leading nature of industrial enterprises means that they play an important role in stimulating and accelerating scientific and technological progress, and in turn activates the development of the national economy. The combination of these two features contributes to the fact that industrial enterprises synthesize the processes of renewal and accumulation of capital and are also characterized by investment attractiveness. By the number of people employed in economic activity, industrial enterprises occupy the first place in the structure of both the world and the national economy.

The article analyzes the dynamics through industrial production indexes: by type of activity; by major industrial groups and by regions of Ukraine.

In the process of the study, a number of problematic features were identified that require state support and regulation. Based on the analysis of industrial production, we can conclude that the formation and improvement of the competitiveness of the Ukrainian economy is determined by the characteristics of the development of individual industries. Industrial production in Ukraine is quite controversial. On the one hand, this area is characterized by numerous problems, and on the other, it is notable in the structure of the economy and in the creation of employment opportunities for the population.

Constant and systematic monitoring of the state of industrial production requires continuous analysis in order to timely identify problems and reasonably apply the set of necessary measures to improve the overall economic situation of Ukraine.

It has been argued that constant and systematic monitoring of the state of industrial production requires continuous analysis in order to timely identify problems and reasonably apply the set of necessary measures to improve the overall economic situation of Ukraine.

Keywords: industry, development, national economy, mechanical engineering, innovations, management.
